

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001).

There are a number of reasons for this increase. One of the main reasons is the increase in the world population. The world population is expected to increase from 6 billion in 1990 to 9 billion in 2050 (FAO 2001). This increase in population will lead to an increase in the demand for food.

Another reason for the increase in undernourishment is the increase in the number of people living in poverty. The number of people living in poverty has increased from 1 billion in 1990 to 1.5 billion in 2000 (FAO 2001). This increase in poverty will lead to an increase in the number of people who are unable to afford enough food.

There are a number of ways in which the world can reduce the number of people who are undernourished. One way is to increase the production of food. This can be done by increasing the area of land used for agriculture and by increasing the yield of crops.

Another way is to reduce the number of people living in poverty. This can be done by increasing the income of people living in poverty and by providing them with access to basic services such as education and health care.

There are a number of other ways in which the world can reduce the number of people who are undernourished. These include increasing the efficiency of food production, reducing food waste, and improving the distribution of food.

It is clear that there are a number of ways in which the world can reduce the number of people who are undernourished. However, it is essential that these ways are implemented in a coordinated and effective manner.

The World Bank has a number of programs that are designed to help countries reduce the number of people who are undernourished. These programs include the International Food Policy Research Institute (IFPRI) and the World Food Programme (WFP).

The IFPRI is a research organization that is dedicated to the study of food policy and food security. The WFP is a United Nations agency that provides food assistance to people in need.

There are a number of other organizations that are also working to reduce the number of people who are undernourished. These include the United Nations Children's Fund (UNICEF) and the World Health Organization (WHO).

It is clear that there are a number of organizations that are working to reduce the number of people who are undernourished. However, it is essential that these organizations work together in a coordinated and effective manner.

The world has a long way to go in order to reduce the number of people who are undernourished. However, if we work together, we can make a difference.
